WHAT IS A CHEETAH FOOT PROSTHESIS?

A Cheetah Foot Prosthesis is a high-performance prosthetic foot designed for active individuals and athletes with lower-limb amputations. Made from lightweight carbon fiber, its unique J-shaped design stores and releases energy during movement, enabling efficient running, jumping, and sports activities while improving speed, balance, comfort, and mobility.

KEY FEATURES OF CHEETAH FOOT PROSTHESIS

LIGHTWEIGHT CARBON FIBER DESIGN

The Cheetah Foot Prosthesis is made from high-strength carbon fiber, making it lightweight, durable, and comfortable for long-term use while supporting active movement.

ENHANCED SHOCK ABSORPTION

The prosthesis absorbs impact forces during walking, running, and jumping, reducing stress on the residual limb and improving overall comfort.

ENERGY STORAGE AND RETURN

Its unique curved design stores energy when the foot contacts the ground and releases it during push-off, helping users run and move more efficiently.

HIGH PERFORMANCE FOR SPORTS AND DAILY ACTIVITIES

Designed for active users and athletes, it provides excellent speed, stability, balance, and agility, enabling participation in sports and an active lifestyle.
